SPRINT #1 Report

Actions to stop doing

This sprint did not produce any behavior that negatively affected the progress on the project.

Actions to start doing

The team is going to take a look at our release plan and reexamine some of the items in the backlog. The team is going to set rankings to the items in our burnout plan. The team is going to meet up for group coding sessions. The team will examine each others understanding technologies that we are using on the project and work together to stay up to speed. The team is going to continue the utilization of Asana Agile Services.

Work completed/not Completed

Justine and Anna completed the development of a home page. It has been successfully pushed to the project's GitHub repository. Babak has searched for server-side documentation and technology. After his efforts the group decided on going with furthering the development of a portable web application and a dynamic structure using python.

Work completion rate

During this sprint the group has completed all user stories in the sprint plan. Also, we have begun to learn about the technologies that are necessary for the development of our project. Technologies that include HTML, CSS3, Javascript and AWS.
