SPRINT #2 Report

Actions to stop doing

This sprint the group made a lot of progress on the project. Most tasks were complete and beyond functional.

Actions to start doing

At this point the only thing that the group might want to consider doing is coding together sometimes. Other than that, the group should continue to do what it is doing. Which is utilizing SCRUM principles to accomplish the tasks at hand.

Work completed/not completed

Justine and anna were able to complete the conversion of the landing page to Python's Flask format. On top of that, there is a sign-up, log-in, and recommend page that was developed using Flask. Also, Babak was able to connect the necessary API and establish a cloud-based database to use in the future. Joe was tasked with establishing a cookies and sessions feature with the sight. By default, Flasks login suite handles sessions and cookies are ready to be implemented when the group decides what data should be backed up on user devices.

Work complete

During this sprint the group has completed all user stories assigned in the sprint plan.
